# FTD.aero B738 procedure trainer

The B738 procedure trainer is a fixed-base flight training device modelled on narrow-body twin jet airliner.

For fraction of FFS simulator cost, real airliner environment is replicated and simulated, for cadets during initial training and qualified pilots in normal line operations.

With all systems and their complexity fully operational, every training of normal and non-normal scenario is possible, building flight proficiency, pilot confidence and technical knowledge.

Starting from TR course and finishing in every training scenario during day to day line operations pilot can train and refresh procedures and SOPs.

Easy to manage flight scenario and simulator setup.

Manageable from Captains position allows to train in pre-selected or self created scenarios at own student time pace and number of repetitions.

## Key Features

- Simple access to Instructor Operating Station
- Instructor settings with intuitive user interface
- All flight scenarios manageable from Captain's seat
- All systems, panels and flight controls fully functional
- Great selection of simulated failures
- Intended for airline and pre-airline training
- Great selection of visualization configuration (simplified with one TV screen to wide seamless HD Visual System)

## Flight Training Applications

- Pre TR training
- Airline SOP training
- Airline special procedure training
- CRM training
- Systems familiarization
- Intermediate simulator training
- Pre-line operations training
- Procedure and SOP refresher trainings
- Non-flying personnel familiarization training
- Enhanced training during MPL courses
